

Separating walls

For the Medium Van, ACT has designed separation walls (when wished those walls can even replace the original wall behind the driver's compartment in order to create more space and or comfort).

This type of wall can be completely closed or fitted with a fixed or sliding window.

If the user wishes to have a hermetically sealed wall, we can seal the wall's contours. In order to continue ventilation of the driver compartment, we will then place ventilation plates at a non-visible area of the front doors.

The wall is made out of polyester or gray ABS and will be smooth at the side of the cargo compartment and will be upholstered with stretch-felt at the driver's side.
