

Transport of people with disabilities

ACT has lightweight lateral steps available for the Medium Van.

- The surface of the side step is covered with anti-slip material.
- The step will be activated mechanically by foot or electrically, activated by the door-open sensor.

For transportation of people with disabilities, ACT also proposes lifts:

- These lifts can be mounted on the side or at the rear of the car.
- Depending on the type of car and the type of transport, we determine together which type of lift is optimal for your requirements.

For the fixation of the wheelchair:

- We can propose approved seat belts to fix seats and passengers.
