

Large Van Side rack

Specification:

Hot-dip galvanized side rack. Black protection strips are mounted on the sides and bottom to protect the load.

The fixation of the construction is done at the top, preferably against an ACT roof rack. At the bottom, the rack is attached to the body at 3 or 4 points.

The bottom is foldable and fitted with reflectors. The rack has the maximum legal width without moving the lights.

As standard, the side racks are equipped with lashing poles with a spring on the top, three poles for L3 and 4 poles for a vehicle L4.

Dimensions:

- L2: 2500 x 2340mm
- L3: 3000 x 2340mm
- L4: 4000 x 2340mm
- L5: 4500 x 2340mm

All these sizes can be adjusted as desired.

If desired, the side rack can be painted in a color of your choice.

These side racks are also available in an aluminum version.

The side racks are designed for fixation against a roof rack, placement without a roof rack is possible at an additional cost.

ACT also creates and installs interior racks
