

Tail lift

ACT presents a lightweight aluminum tail lift, specially designed for the Van chassis.

We mainly install all types of Dhollandia tail lifts. For certain specific activities and at the request of the customer, we also install loading lifts from Zepro, Anteo, MBB, etc.

At the back of delivery vans we place Dhollandia LSPs (with a platform of 1450 x 1550 mm, capacity of 500 kg).

The tailgate can also replace the rear doors if desired:

These tail lifts all function hydraulically and are equipped with an automatic tilting system.

All lifts are equipped with security systems and a main switch.

We can offer you the following options:

- Towbar system
- Anodized platform
- Security lights installed on the platform
- Container / roll stops
- Different lengths
- Remote control
- Foot control
- Increased lifting capacity in combination with chassis reinforcement.
